

County and Metropolitan Area Personal Income

THIS article presents estimates of personal income for 1978 and revised estimates for earlier years for the Nation's Standard Metropolitan Statistical Areas (SMSA's), counties, and county equivalents.¹ Estimates for 1976 and 1977 have been revised to incorporate the routine annual revision of the national estimates. Estimates for 1973-75 have been revised to incorporate data from the 1977 Census of Governments as well as more current data for nonfarm proprietors' income.

Estimates for the years 1959, 1962, and 1965-68 that incorporate the 1976 national benchmark revisions are available for the first time. Previously, county and SMSA estimates that incorporated the benchmark revisions were available only back to 1969. Discussion of the county and SMSA benchmark revision appears in Part II of the June 1978 SURVEY OF CURRENT BUSINESS, and discussion of the benchmark revisions of the national income and product accounts appears in Part I of the January 1976 SURVEY.

Total and per capita personal income for the 273 SMSA's for 1959, 1965, 1969, 1977, and 1978, are shown in Table 1.² Total and per capita personal income for the 3,141 counties and county equivalents are shown for the same years in Table 2.³

1. These estimates supersede those presented in the April 1976 SURVEY OF CURRENT BUSINESS.

2. Included for the first time are five newly designated SMSA's: Bismarck (Dakota and Morton Counties), North Dakota; Elkhart (Elkhart County), Indiana; End (Garfield County), Oklahoma; Iowa City (Johnson County), Iowa; and Las Cruces (Doña Ana County), New Mexico.

3. Separate estimates for the independent cities and certain counties of Virginia, the five counties comprising New York City, New York, and De Kalb and Fulton Counties, Georgia, are not available for 1958-65. For those years, the independent cities of Virginia are combined with the counties from which they were primarily formed; New York City appears as an aggregate; and De Kalb and Fulton Counties are combined as one unit. Milwaukee and Shawano Counties, Wisconsin are combined for 1968-78.

Definition of total and per capita personal income

Total personal income is the current income received by residents of an area from all sources. It is measured before deduction of income and other personal taxes, but after deduction of personal contributions for social security, government retirement, and other social insurance programs. It consists of wage and salary disbursements (covering all employee earnings, including executive salaries, bonuses, commissions, payments in kind, incentive payments, and tips), various types of supplementary earnings termed "other labor income," proprietors' income, rental income of persons, dividends, personal interest income, and government and business transfer payments.

The definitions underlying the local area estimates are, for the most part,

the same as those underlying the personal income estimates in the national income and product accounts. The major difference is in the treatment of U.S. citizens temporarily working or assignment abroad. The national estimates include not only Federal personnel—civilian and military—stationed abroad, but also—since the 1976 benchmark revisions—U.S. residents employed by private U.S. firms on temporary foreign assignment. The State and local area estimates include only persons residing in the 50 States and the District of Columbia.

Per capita personal income is computed by dividing the total personal income by midyear population estimates. Population data for July for each year are provided by the Bureau of the Census; the college student population, however, is measured as of April 1.

Acknowledgments

The personal income estimates were prepared under the direction of Edwin J. Coleman, Chief of the Regional Economic Measurement Division. He was assisted by Jeanne S. Goodman. Tables were prepared by Eunice P. James and Kathy A. Albetski of the Regional Economic Information System Branch. Secretarial support was provided by Joan T. Jiménez.

Estimates of private nonfarm wages and salaries and other labor income were prepared under the supervision of Elizabeth H. Queen, Chief of the Regional Wage Branch. She was assisted principally by: David J. Albright, Carl J. Carlson, Sharon C. Carnevale, Carol E. Evans, Kevin O'Brien, Michael G. Pilot, William E. Reid, Jr., and Victor Sahadachny.

Estimates of farm income, government wages and salaries, government other labor income, proprietors' income, property income, transfer payments, and contributions for social insurance were prepared under the supervision of Kenneth P. Berkman, Chief of the Regional Income Branch. He was assisted principally by: Vivian G. Conklin, Gary V. Kennedy, Arthur L. Senseig, and Andrew E. Weiser.

Residence adjustments, disclosure-avoidance and final preparation of the local area personal income accounts were performed under the supervision of David W. Cartwright, Chief of the Regional Economic Information System Branch. He was assisted principally by Wallace K. Bailey, Paul M. Levit, and Stuart A. Schwartz.

The per capita personal income estimates should be used with caution for several reasons. In many instances, an unusually high (or low) per capita personal income is the temporary result of unusual conditions, such as a bumper crop, a major construction project (e.g., a defense facility, nuclear plant, or dam), or a catastrophe (e.g., a tornado or drought). In some cases, a high per capita personal income is not representa-

tive of the standard of living in an area. For example, a construction project may attract a large number of high-paid workers who are included in the population but who send a substantial portion of their wages to dependents living in other areas. Conversely, a county with a large institutional population (e.g., residents of a college, correctional institution, or domiciliary medical facility) may show an unusually low per capita

personal income, which is not necessarily indicative of the economic well-being of the noninstitutional population. Moreover, population is measured at midyear whereas income is measured as a flow over the year. Therefore, a significant change in population during the year can cause a distortion in the per capita personal income estimates, particularly if the change occurs around midyear.

PERSONAL income by type of payment and labor and proprietors' income by major industry groups, as shown in Table A, are available for SMSA's and for counties for 1959, 1962, and 1965-78. This information can be obtained for one or more counties or SMSA's from the Regional Economic Information System of the Regional Economic Measurement Division, Bureau of Economic Analysis. There is a charge of one dollar for each State, SMSA, or county table. However, charges will not exceed: \$250 for a complete set of SMSA tables, and \$1,000 for an entire set of State and county tables for the United States. The minimum charge for each request is five dollars.

A nine volume set, *Local Area Personal Income, 1973-78*, will be available by September. A national volume (volume 1) will contain personal income estimates for the United States and all the regions, States, SMSA's, and BEA economic areas. It will also include a detailed description of the sources and methods used in estimating local area personal income, as well as analytic tables, charts, and maps. Each of the eight regional volumes (volumes 2-9) will contain detailed personal income estimates for the States, SMSA's, and counties of a single region with related analytic tables, charts, maps, and a summary methodology.

1. Estimates based on 1967 SIC.

2. Estimates based on 1972 SIC.

3. Consists of wage and salary disbursements, other labor income, and proprietors' income. Primary source for private sector wages: 86-202 colored wages—Connecticut Employment Security Division.

4. Includes the capital consumption adjustment for nonfarm proprietors.

5. Includes wages and salaries of U.S. residents working for international organizations in the United States.

6. Includes the capital consumption adjustment for rental income of persons.
